

Statisticians focus more on

- uncertainty quantification
- theoretical guarantees on performance
- variations on well-established model classes
- applications in science and medicine

Machine learners focus more on

- algorithms and computation
- empirical performance on benchmark datasets
- inventing complex new methods/models
- applications in tech and industry

Statistical Learning vs. Machine Learning

The difference is not one of algorithms but of **goals and strategies**

the data generating process

Statistical Learning vs. Machine Learning

The difference is not one of algorithms or practices but of **goals** and **strategies**

Statisticians focus more on

- uncertainty quantification
- theoretical guarantees on performance
- variations on well-established model classes
- applications in science and medicine

Machine learners focus more on

- algorithms and computation
- empirical performance on benchmark datasets
- inventing complex new methods/models
- applications in tech and industry

the data generating process

Induction vs. Deduction
