

Assessing Model Fit

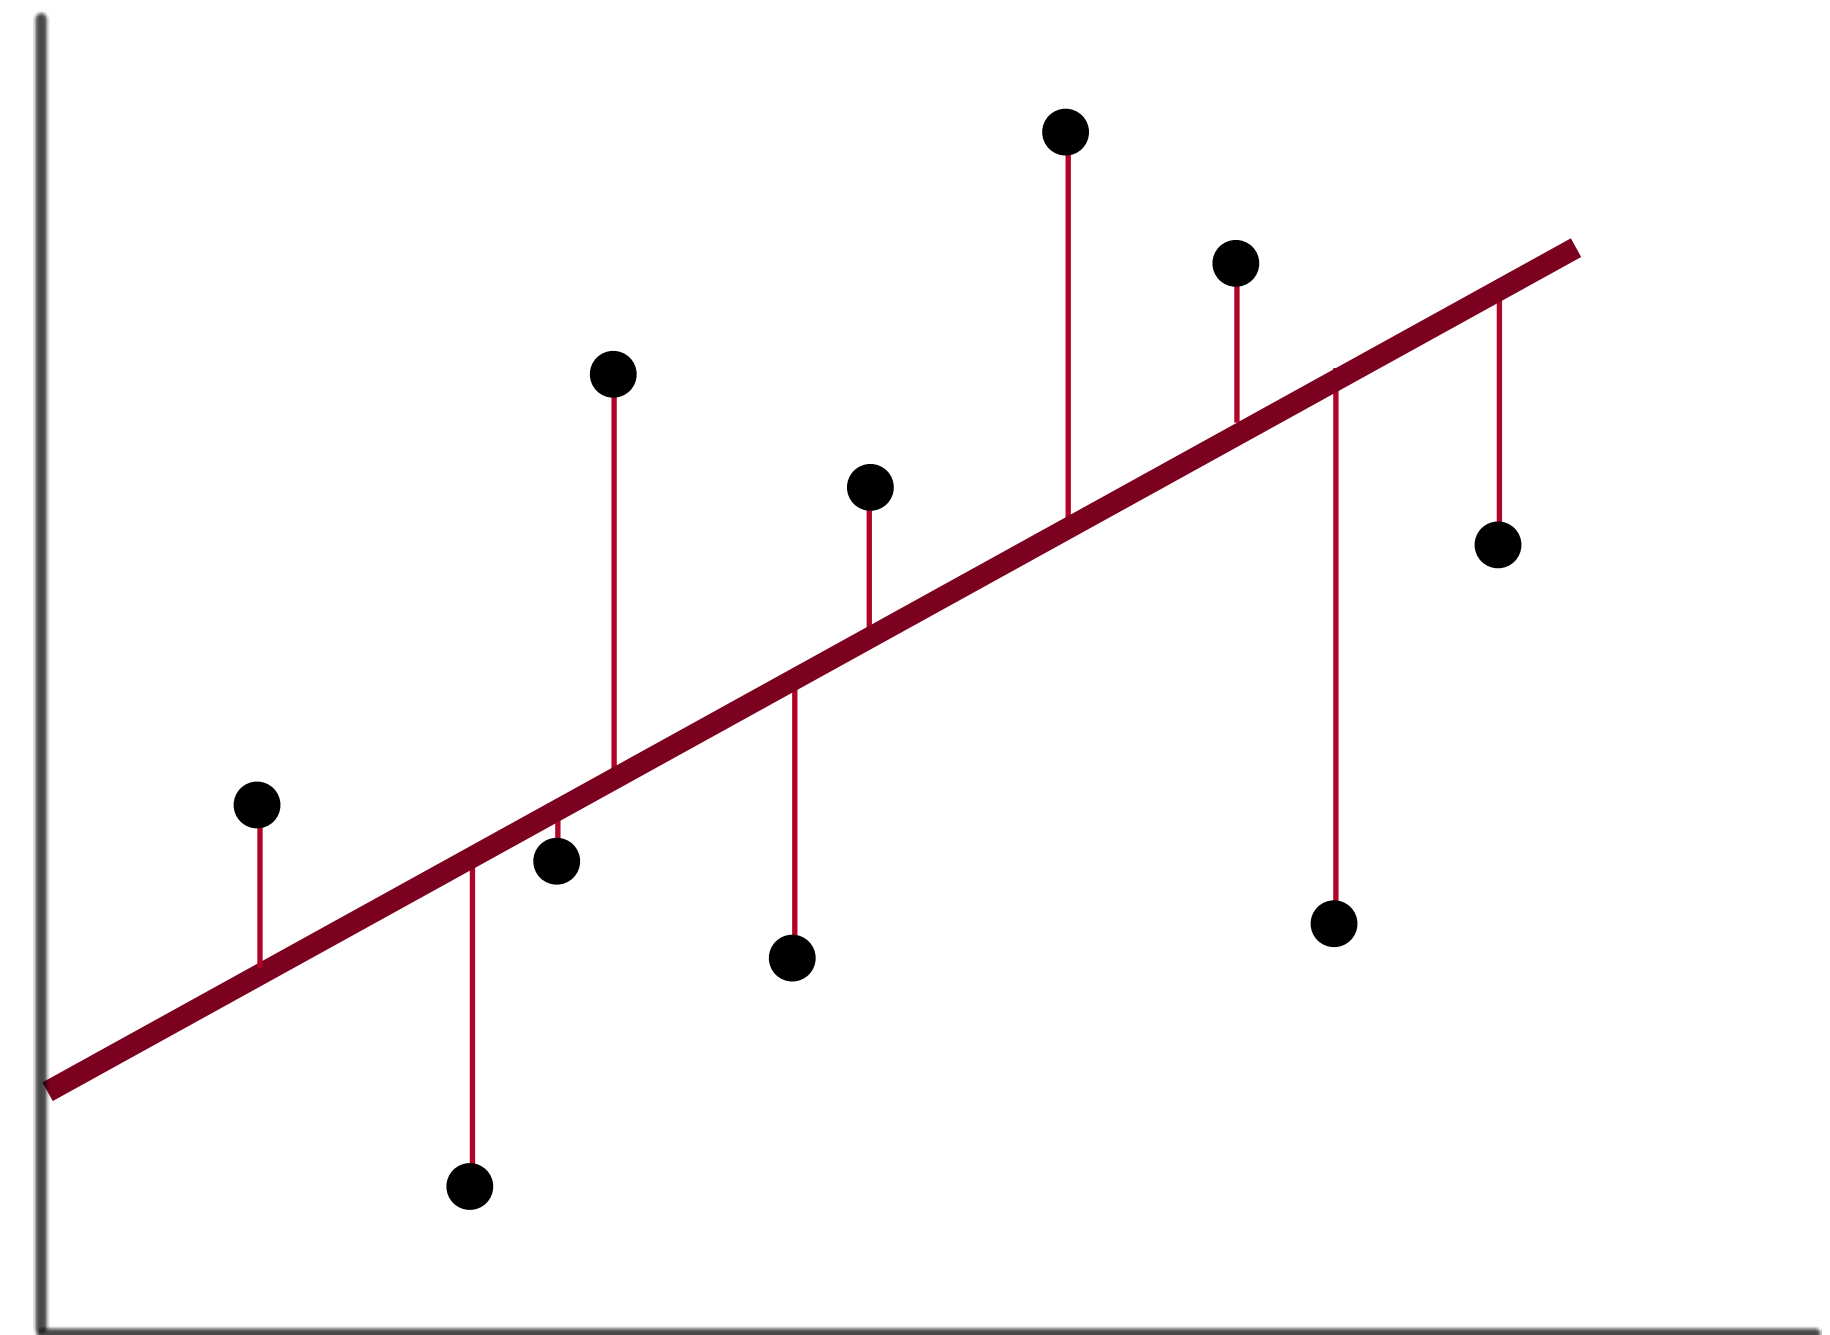

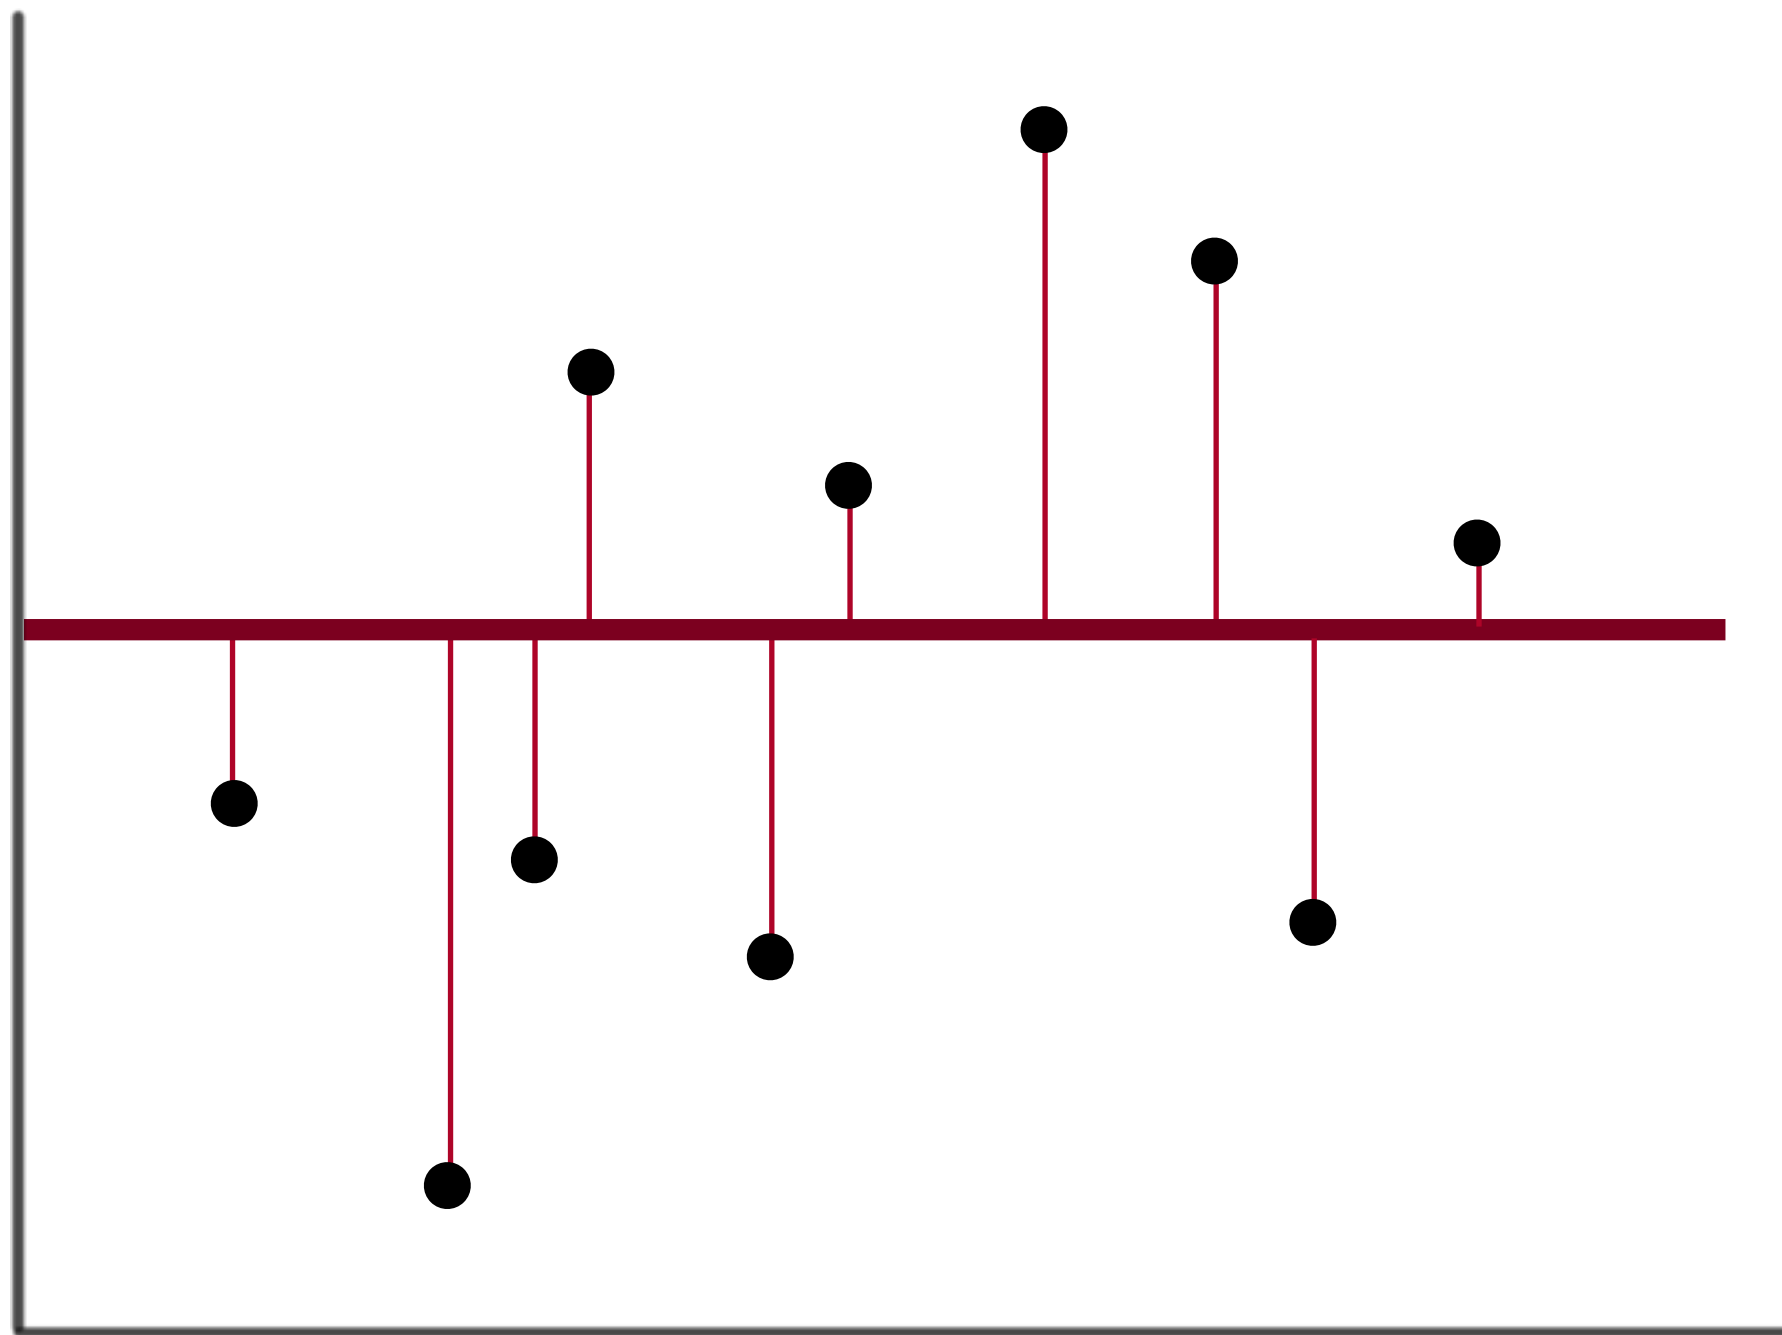

$$R^2 = 1 - \frac{\sum_i (\text{actual}_i - \text{predicted}_i)^2}{\sum_i (\text{actual}_i - \text{average})^2}$$

Assessing Model Fit

$$R^2 = 1 - \frac{\sum_i (\text{actual}_i - \text{predicted}_i)^2}{\sum_i (\text{actual}_i - \text{average})^2}$$

Assessing Model Fit

$$R^2 = 1 - \frac{\sum_i (\text{actual}_i - \text{predicted}_i)^2}{\sum_i (\text{actual}_i - \text{average})^2}$$
