

The Algorithm

1 Find all core points.

2 Pick random core point, find other core points that are density reachable from it and assign to cluster.

3 Add border points and cluster one is done.

The Algorithm

- 1 Find all core points.
- 2 Pick random core point, find other core points that are density reachable from it and assign to cluster.
- 3 Add border points and cluster one is done.
- 4 Repeat from (2) until all clusters detected.
