

The Radial Kernel (RBF)

The **Radial Kernel**

$$K(a, b) = e^{-\gamma(a - b)^2}$$

projects to **infinite dimensional** space
works similar to nearest neighbors classifier

The Radial Kernel (RBF)

The Radial Kernel

$$K(a, b) = e^{-\gamma(a - b)^2}$$

projects to **infinite dimensional** space
works similar to nearest neighbors classifier

the amount of influence one observation has on
another is a function of the squared distance

γ scales the squared distance to determine the strength of influence
(determined by **cross validation**)
