

# The Radial Kernel (RBF)

The **Radial Kernel**

$$K(a, b) = e^{-\gamma(a - b)^2}$$

projects to **infinite dimensional** space  
works similar to nearest neighbors classifier

# The Radial Kernel (RBF)

## The Radial Kernel

$$K(a, b) = e^{-\gamma(a - b)^2}$$

projects to **infinite dimensional** space  
works similar to nearest neighbors classifier

the amount of influence one observation has on  
another is a function of the squared distance

$\gamma$  scales the squared distance to determine the strength of influence  
(determined by **cross validation**)
