

visual representations of functions and relations

example

# visual representations of functions and relations

when domain or range of a relation is  
infinite  $\implies$  not possible to visualize the entire relation  
finite  $\implies$  lists and graphs can be used

## example

let  $A$  be a small finite set:  $A = \{1,2,3,4\}$

the relation  $R$  is defined as  $R = \{(1,1), (4,4), (1,3), (3,2), (1,2), (2,1)\}$

graph representation:
