

geometric random variable

 $P(X = x | p) = p(1 - p)^{x-1}$

exercise 5

exercise 6

geometric random variable

- A r.v. modeling the number of (identical) Bernoulli trials needed to obtain the first success
- Infinite outcomes $\{1,2,3...,\infty\}$
- ullet Single parameter p, probability of a success for each trial
- Shorthand notation: $X \sim \text{Geo}(p)$

•
$$E(X) = \frac{1}{p}$$
, $V(X) = \frac{1-p}{(p^2)}$

exercise 5

What is the probability of flipping a coin more than 4 times before getting a heads?

exercise 6

What is the expected number of rolls it will take to get a 7 when rolling two dice?

$$P(X = x | p) = p(1 - p)^{x-1}$$

$$X \quad P(X = x)$$

$$1 \quad p$$

$$2 \quad p(1 - p)$$

$$3 \quad p(1 - p)^{2}$$

$$4 \quad p(1 - p)^{3}$$

$$\vdots \quad \vdots$$

$$p(1 - p)^{\infty} \approx 0$$

oinomial random variable

- A r.v. modeling the number of successes in a fixed number of independent Bernoulli trials.
- Discrete outcomes $\{0,1,2,3...,n\}$
- Two parameter
 - p probability of a success for each trial
 - *n* number of trials
- Shorthand notation: $X \sim \text{Binom}(n, p)$
- E(X) = np, V(X) = np(1 p)

$$P(X = x | n, p) = {n \choose x} p^{x} (1 - p)^{n-x}$$

$$X \quad P(X = x)$$

$$0 \quad \binom{n}{0} p^{0} (1-p)^{n}$$

$$1 \quad \binom{n}{1} p^{1} (1-p)^{n-1}$$

$$2 \quad \binom{n}{2} p^{2} (1-p)^{n-2}$$

$$\vdots \qquad \vdots$$

$$n-1 \quad \binom{n}{(n-1)} p^{n-1} (1-p)^{1}$$

$$n \quad \binom{n}{n} p^{n} (1-p)^{0}$$
