## Backpropagation

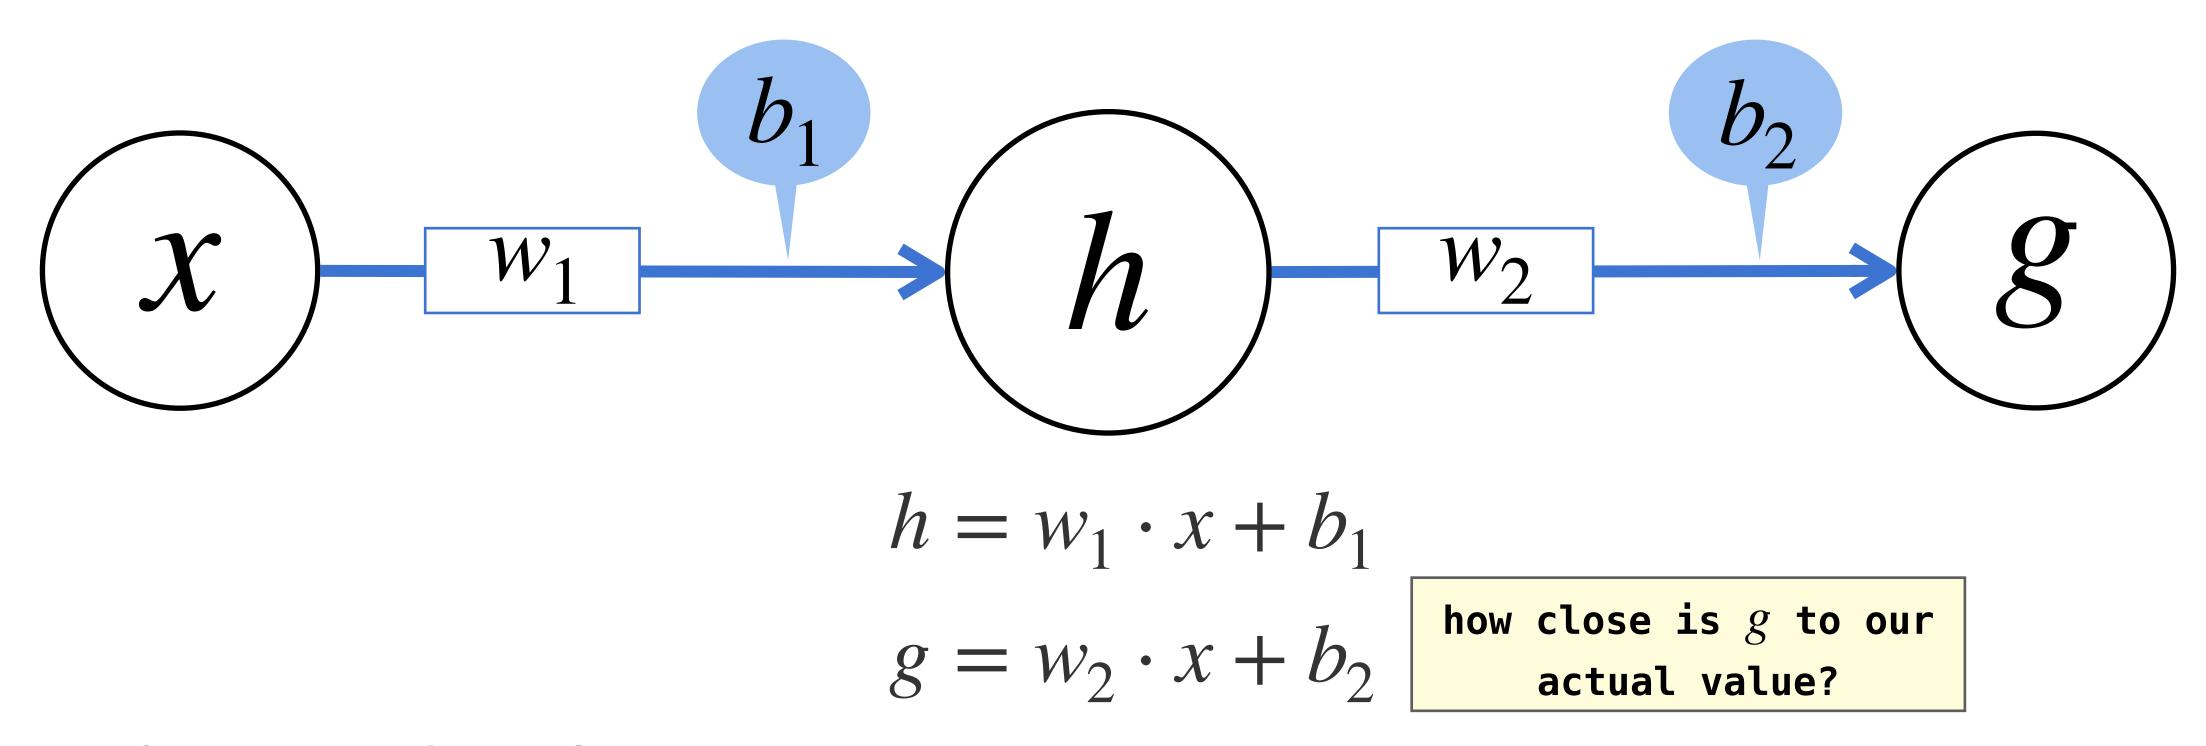

## Chain rule:

If we want to know how changing x affects f(g(x)) we first need to think about how changing x affects g(x) and then how changing g(x) affects f(g(x)):

$$\frac{\partial f(g(x))}{\partial x} = \frac{\partial f}{\partial g} \cdot \frac{\partial g}{\partial x}$$

the derivative of the outer function f evaluated at g(x) multiplied by the derivative of the inner function g(x)

## Backpropagation

Loss function (MSE):

$$\frac{1}{N} \sum_{i}^{N} (y_i - g_i)^2 \implies \frac{1}{N} \sum_{i}^{N} (y_i - (w_2 \cdot (w_1 \cdot x_i + b_1) + b_2)^2$$
