The Radial Kernel (RBF)

The Radial Kernel

$$K(a,b) = e^{-\gamma}(a-b)^2$$

projects to infinite dimensional space works similar to nearest neighbors classifier

we can use the Polynomial Kernel to get the intuition behind how Radial Kernel works in infinite dimensions

$$K(a,b) = (a \cdot b + r)^d$$

set $r = 0 \Longrightarrow (a \cdot b)^d = a^d \cdot b^d$
set $d = 1 \Longrightarrow (a) \cdot (b)$

The Radial Kernel (RBF)

The Radial Kernel

$$K(a,b) = e^{-\gamma}(a-b)^2$$

projects to infinite dimensional space works similar to nearest neighbors classifier

we can use the Polynomial Kernel to get the intuition behind how Radial Kernel works in infinite dimensions

$$K(a,b) = (a \cdot b + r)^d$$

 $\operatorname{set} r = 0 \Longrightarrow (a \cdot b)^d = a^d \cdot b^d$
 $\operatorname{set} d = 1 \Longrightarrow (a) \cdot (b)$
 $\operatorname{set} d = 2 \Longrightarrow (a^2) \cdot (b^2)$
