Cross Validation and Panel Data

- Autocorrelation issues: assumption of i.i.d. observations won't hold over time

- The CV methods presented will ignore the sequential nature of time

$\Longrightarrow$ Nested Cross Validation

- a nested loop of cross-validation:
  - ▸ inner loop used for parameter tuning:
    K-fold CV is used to pick parameter values

  - ▸ outer loop is used for performance evaluation
    another K-fold CV used to evaluate model with selected parameters

- The CV methods presented will ignore the sequential nature of time

Cross Validation and Panel Data

- Autocorrelation issues: assumption of i.i.d. observations won't hold over time
- The CV methods presented will ignore the sequential nature of time

$\Longrightarrow$ **Nested Cross Validation**

- a nested loop of cross-validation:
  - ▸ inner loop used for parameter tuning:
    K-fold CV is used to pick parameter values

  - ▸ outer loop is used for performance evaluation
    another K-fold CV used to evaluate model with selected parameters

- The CV methods presented will ignore the sequential nature of time

Cross Validation and Panel Data

- Autocorrelation issues: assumption of i.i.d. observations won't hold over time
- The CV methods presented will ignore the sequential nature of time

$$\implies \textbf{Nested Cross Validation}$$
